

# INSTALLATION INSTRUCTIONS

Insert the CD into your computers CD/DVD. The autorun program will start and launch the installer program. If the program does not start, go to Start/Run and click the Browse... button. Locate your computers CD/DVD drive and select the XInstall.exe file and double click. Select OK to launch the iQueue installer.

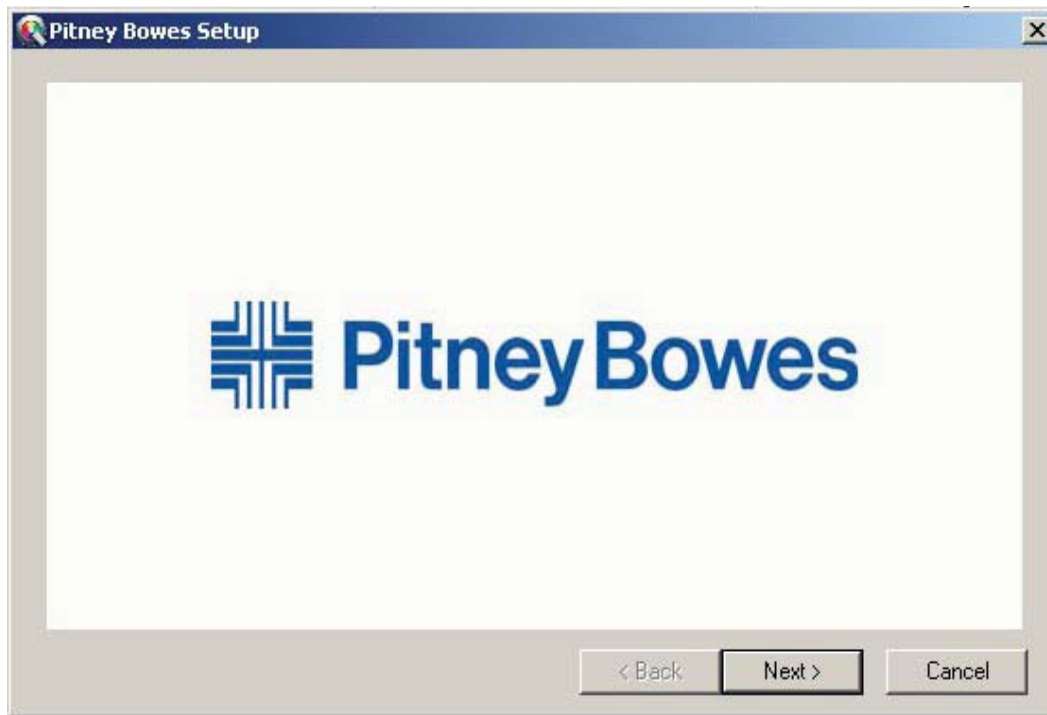

Select the iQueue Setup button to start the installation process. Read the simple step by step instructions and select the appropriate buttons to completion.

Once iQueue is installed, launch iQueue to identify the computers IP Address. This address is needed for the iQueue print driver installation. If your computer has more than one Ethernet card installed you will see two IP Addresses. Select the primary IP Address for the printer installation. Consult your system administrator if you are unsure about what IP Address to use.

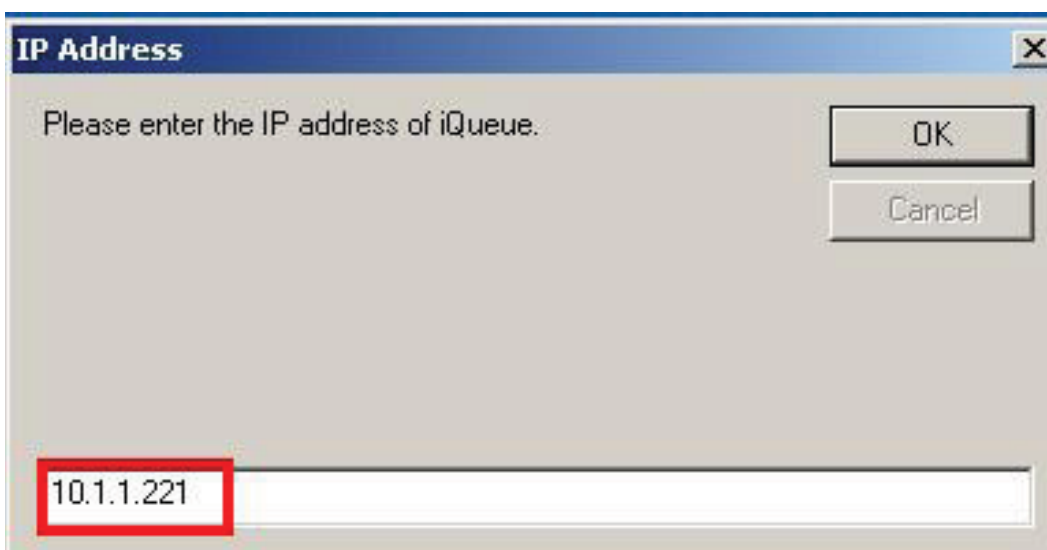

From the iQueue Installer main window select the Windows OS type.

Click the Next button. Read the simple step by step instructions and select the appropriate buttons.

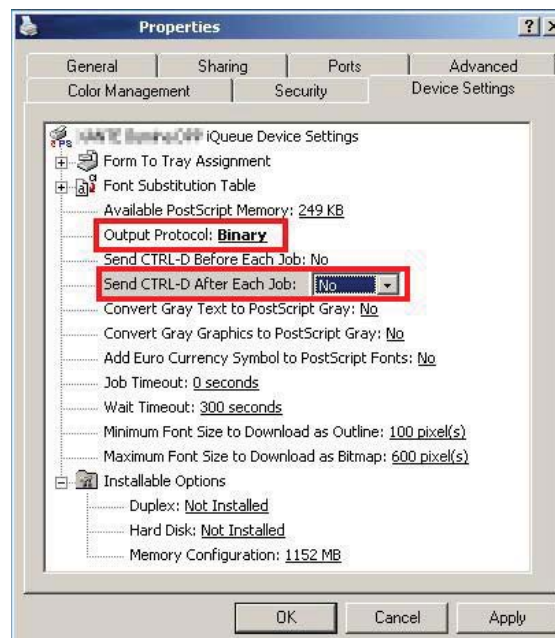

When the IP Address window appears. Type in the IP Address and press OK to continue the print driver installation.

The Hardware Installation window appears. Click the Continue Anyway button to setup the network connection and install the print driver files.

Once the driver is installed the Printer's Properties window will appear.

Change the Output Protocol to Binary and the Send CTRL-D After Each Job to No as shown above. Click OK to complete iQueue and Printer driver installation.
